- Write Programming Blogs for Children's. Designed and Translate Programing related things into Bengali for programming hero website.

### PROJECTS

#### Green Traveler

Full-Stack Developer

July 2022 - October 2022

- All Trips route In this project, I have built a website of a tourism-related website. To build this project I have used React and Bootstrap. On this website, the end-user can see the tour package offered by the tourism company. The end-user can click a specific tour to know more details and can book that tour if the user is logged in otherwise the user will be redirected to the login page. If the user is logged in then he/she can see the trips he/she booked for himself in the 'My Trips route'. If the user is logged in then he/she can see the tour booked by all users of the website in the 'Manage All Trips route'.
